

Sakib Ahmed

Senior AI Engineer — LLMs · RAG · AWS · Python

sakibahmed2018go@gmail.com · +44 7440 551834 · <https://sakib.qbitlab.tech/> · sakib-ahmed-6339081a7 · Sakib323

PROFESSIONAL SUMMARY

Senior AI Engineer with 5+ years of hands-on machine learning experience, specializing in LLMs, RAG, and Python-based data science. Proven track record of designing computationally intensive STEM problems and deploying scalable AI solutions on AWS. Expert in Python (pandas, numpy, scipy, scikit-learn), SQL, and modern frameworks (PyTorch, LangChain). Published researcher in deep neural networks and efficient language models, with strong written English (C1+).

PROFESSIONAL EXPERIENCE

Data Scientist, QBitLab — East Zindabazar, Sylhet- 3100, Bangladesh Jan 2023 - Nov 2025

- Fine-tuned Llama 2/3 and Mistral models using QLoRA for domain-specific tasks, improving accuracy by 15%.
- Developed RAG pipeline with Pinecone vector database, enabling private document querying for SaaS products.
- Optimized LLM inference using vLLM and INT8/FP16 quantization, reducing latency by 40% on resource-constrained environments.
- Engineered migration of internal SaaS product to AWS, cutting infrastructure costs by 22% and improving API response time by 33%.
- Deployed lightweight CNN models (MobileNet) in React Native for real-time on-device image classification.

AI Engineer, Neuron AI — Motijheel, Dhaka - 1000, Bangladesh Feb 2021 - Nov 2022

- Designed and deployed GenAI features for e-commerce clients, including automated product description generators and AI chatbots, boosting conversion rates by 20%.
- Engineered ETL pipelines with Apache Airflow for automated data ingestion and transformation, ensuring high-quality data for predictive modeling.
- Architected data warehouse on AWS Redshift/S3 and real-time streaming systems, optimizing data retrieval speeds for high-traffic dashboards.
- Developed cross-platform mobile apps (React Native/Firebase) integrating real-time ML inference for user-friendly interfaces.

AI Engineer & Full-Stack Developer, Fiverr 2020-2025

- Developed DNN models with complete frontend/backend architectures for diverse client requirements.
- Engineered Geospatial Intelligence system for building extraction, processing 5GB+ multi-spectral TIFF files through high-performance data pipeline.
- Built CNN model for semantic segmentation with Random Forest and KNN ensembles for land-use classification.
- Architected self-hostable web platform with interactive maps and real-time spatial analytics for data-driven decision-making.

EDUCATION

Bachelor of Mathematics and Machine Learning, Richmond American University London, London, W4 5AN 2029

TECHNICAL SKILLS

ML / AI

PyTorch · TensorFlow · LangChain · Hugging Face · RAG · QLoRA · Fine-tuning · LLMs · CNNs · ViT · scikit-learn · statsmodels

Cloud & DevOps

AWS (EC2, S3, Lambda, SageMaker, Redshift) · Docker · Kubernetes · CI/CD · GitHub Actions

Data Engineering	Apache Airflow · ETL · PostgreSQL · MongoDB · Redis · SQL
Languages & Frameworks	Python · FastAPI · Django · Flask · React Native · Java · SQL
Other	TDD · Git · REST APIs · IoT · Edge AI · GenAI · Prompt Engineering · Vector Databases

RESEARCH EXPERIENCE

A Deep Neural Network Approach for Highly Efficient Lightning Prediction and Warning Systems, 8th International Conference on Engineering Research, Innovation and Education (ICERIE 2025) May 2025

Developed a highly accurate lightning prediction model using Deep Neural Networks (DNNs) and meteorological parameters. Designed computationally intensive STEM problems requiring Python programming and non-trivial reasoning chains, with verified solutions using standard libraries (Numpy, Pandas, Scipy).

Reimagining LLMs: Matrix Multiplication-free Language Model, Metropolitan University, Sylhet, Bangladesh Jun 2025

Constructed a Matrix Multiplication-free Language Model with ternary weights {-1, 0, 1} for cost-effective, scalable LLM architecture. Applied creative problem-solving approaches to enable deployment on edge devices and IoT systems while maintaining performance comparable to state-of-the-art models.

TEACHING EXPERIENCE

Course Instructor and Mentor, FTP BOOTCAMP Jan 2024 - Mar 2025

- Taught basics of machine learning with hands-on STEM education experience.
- Mentored students in Python programming and data science projects.

PROJECTS

Geospatial Intelligence System 2020-2025

Engineered a system for building extraction from 5GB+ multi-spectral TIFF files using high-performance data pipelines. Applied semantic segmentation with CNN and ensemble methods (Random Forest, KNN) for land-use classification, demonstrating expert Python and SQL skills for data manipulation.

SCHOLASTIC ACHIEVEMENTS

- Global Finalist in NASA International Space Apps Challenge.
- Published research on deep neural networks for lightning prediction at ICERIE 2025.
- Developed Matrix Multiplication-free Language Model for efficient LLM deployment on edge devices.
- Reduced infrastructure costs by 22% and improved API response time by 33% through AWS migration.
