

Sakib Ahmed

Senior AI Engineer — LLMs · RAG · AWS · Python

sakibahmed2018go@gmail.com · +44 7440 551834 · <https://sakib.qbitlab.tech/> · sakib-ahmed-6339081a7 · Sakib323

PROFESSIONAL SUMMARY

Data Scientist and Full-Stack Developer with 4+ years of experience designing computational engineering problems and developing Python-based solutions for AI systems. Specialized in fine-tuning LLMs, building RAG pipelines, and deploying models on AWS. Proven track record of optimizing infrastructure costs and improving API response times. Strong written English (C1+) and expertise in numerical methods, system design, and practical engineering constraints.

PROFESSIONAL EXPERIENCE

Data Scientist, QBitLab — East Zindabazar, Sylhet- 3100, Bangladesh Jan 2023 - Nov 2025

- Fine-tuned Llama 2/3 and Mistral models using QLoRA for domain-specific engineering tasks.
- Developed a RAG pipeline enabling SaaS products to query private documentation via Pinecone vector storage.
- Optimized LLM inference with vLLM and quantization (INT8/FP16) for resource-constrained environments.
- Migrated internal SaaS product to AWS, reducing infrastructure costs by 22% and API response time by 33%.
- Deployed lightweight CNN models (MobileNet) in React Native apps for real-time on-device image classification.
- Designed computational engineering problems requiring Python and numerical methods for iterative solutions.

AI Engineer, Neuron AI — Motijheel, Dhaka - 1000, Bangladesh Feb 2021 - Nov 2022

- Designed and deployed GenAI features for e-commerce, including automated product description generators and AI chatbots.
- Engineered ETL pipelines with Apache Airflow for automated data ingestion and transformation.
- Architected data warehouse solutions on AWS (Redshift/S3) and real-time streaming systems for high-traffic dashboards.
- Developed cross-platform mobile apps (React Native/Firebase) integrating real-time ML inference.
- Created engineering problems simulating real workflows, verified solutions using Python with NumPy and SciPy.

AI Engineer & Full-Stack developer, Fiverr 2020-2025

- Developed DNN models and full-stack architectures for diverse client requirements.
- Engineered a Geospatial Intelligence system for building extraction, processing 5GB+ multi-spectral TIFF files.
- Built CNN model for semantic segmentation with Random Forest and KNN ensembles for land-use classification.
- Architected a self-hostable web platform with interactive maps and real-time spatial analytics.

EDUCATION

Bachelor of Mathematics and Machine Learning, Richmond American University London, London, W4 5AN 2029

TECHNICAL SKILLS

ML / AI	PyTorch · TensorFlow · LangChain · Hugging Face · RAG · QLoRA · Fine-tuning · LLMs · CNNs · ViT
Cloud & DevOps	AWS (EC2, S3, Lambda, SageMaker) · Azure · Docker · Kubernetes · CI/CD · GitHub Actions
Data Engineering	Apache Airflow · Apache Kafka · ETL · PostgreSQL · MongoDB · Redis
Languages & Frameworks	Python · FastAPI · Django · Flask · React Native · Java · SQL
Other	TDD · Git · REST APIs · IoT · Edge AI · AR/VR (Unity/C#)

RESEARCH EXPERIENCE

A Deep Neural Network Approach for Highly Efficient Lightning Prediction and Warning Systems, 8th International Conference on Engineering Research, Innovation and Education (ICERIE 2025) May 2025

Developed a highly accurate lightning prediction model using Deep Neural Networks (DNNs) and meteorological parameters. Designed computational engineering problems simulating real-world weather prediction workflows, verified with Python and numerical methods.

Reimagining LLMs: Matrix Multiplication-free Language Model, Metropolitan University, Sylhet, Bangladesh Jun 2025

Constructed a Matrix Multiplication-free Language Model with ternary weights for cost-effective, lightweight LLM architecture. Applied system design and optimization techniques to enable deployment on edge devices and IoT systems.

TEACHING EXPERIENCE

Course Instructor and Mentor, FTP BOOTCAMP Jan 2024 - Mar 2025

- Taught basics of Machine Learning with hands-on STEM education experience.
- Guided students in designing computational problems and verifying solutions using Python.

PROJECTS

Geospatial Intelligence System 2020-2025

Engineered a system for building extraction from 5GB+ multi-spectral TIFF files using CNN and ensemble models. Designed computational engineering problems simulating real-world geospatial analysis workflows, verified with Python and NumPy.

SCHOLASTIC ACHIEVEMENTS

- Global Finalist, NASA International Space Apps Challenge
 - Published paper at ICERIE 2025 on lightning prediction using DNNs
 - Reduced infrastructure costs by 22% and API response time by 33% through AWS migration
 - Developed Matrix Multiplication-free LLM for edge devices
-
